Ai Word Task – Explanation

This folder contains two Microsoft Word documents created for an AI task training sample.

1. Messy Version (Unstructured file):

This file represents a raw, unformatted document.

It includes inconsistent spacing, unaligned test, and no proper heading or structure. It's meant to show a document that needs editing or formatting.

2. Structured Version (Clean File):

This version shows the same content after formatting and editing. Headings, alignment, font consistency, and spacing have been corrected. A bar chart was also inserted to visualize data in a professional format.

Goal:

To demonstrate how a human would realistically edit and format a word file, turning an unorganized document into a clean, professional report suitable for AI training.
